

## About us

Proxerex™ was developed by sigma-tau HealthScience, a company which has dedicated many years of research in the role that metabolism plays in maintaining health. Sigma-tau has a deep understanding of the body's metabolic processes and the role that nutrients have in these processes.

At sigma-tau HealthScience, we believe that food supplements should be supported by strong scientific research and testing. That's why we are committed to taking a scientific approach to the development of food supplements and applying pharmaceutical-grade quality controls to each and every one of our products.

## Why Proxerex™

New, improved patented formulation for sexually active men.

Each Proxerex™ powder sachet contains:

• L-arginine	2,500 mg
• Propionyl-L-carnitine	250 mg
• Vitamin B3 (Niacin)	8 mg
• Cocoa powder	200 mg
• Maca extract	150 mg
• Acetyl-L-carnitine	125 mg
• Zinc	10 mg
• Selenium	50 mcg

Recommended use: 1 sachet/day.

## Male Sexual Health

Male sexual arousal is a complex process that involves the brain as well as the nerves, muscles, and blood vessels of the penis. Maintaining healthy blood flow and nerve function is essential for normal erectile function.

**As men age, it is important to adopt a lifestyle which includes a healthy diet, not smoking, maintaining normal weight and regular exercise. A healthy lifestyle will help support normal blood flow and nerve function of the penis.**

Proxerex™ is a patented food supplement containing L-arginine, propionyl-L-carnitine, acetyl-L-carnitine, zinc, selenium, cocoa flavanols, maca extract and vitamin B3.

## Erectile Function

Penile erection is triggered by two main mechanisms: direct stimulation of the genitalia and/ or through stimuli coming from the brain like fantasy, scent, etc.

Upon stimulation, chemicals are released in the brain that cause signals to pass down the spinal cord through special nerves into the penis.

These nerves release a molecule called nitric oxide that stimulates blood flow to the penis thereby causing erection.

## Factors Affecting Erection

Anxiety, social pressure, performance nervousness or fear can all negatively affect erection probably by neutralizing brain signal processes needed for normal erectile function. In fact, many men with erectile problems also have low sexual drive.

Medical conditions like diabetes and cardiovascular disease can reduce proper blood flow thereby, also limiting erection.

To maintain sexual health it is important to reduce stress, have regular medical checkups, and lead a healthy lifestyle which includes a diet rich in nutrients that are needed to support proper blood flow and erectile function.

**Proxerex™ complements a balanced diet by providing key nutrients that contribute to the:**

- maintenance of normal testosterone levels (zinc)
- reduction of tiredness and fatigue (vitamin B3)
- protection of cells from oxidative stress (selenium).
